Incident Room

is based on a non-fungible token and invites consideration on the topic cross-pollination between archives. Shall we call it: Incident.0-2024? It might serve an acknowledgement of a shared room for decision making on the Ethereum blockchain. The token speaks of a shared space between parties involved in the grant process and hopes to woo different concepts of legitimacy. The Incident.0-2024 if minted, will be placed at the Fonds' pleasure without further ado once the Fonds provides the public address of a nft wallet and be ready for a beta test. This page furnishes the token's content as the Aztec code above and below as a short human readable text. An additional remark, the token's originality is only one of its referential dimensions. Hopefully, other aspects will also put in an appearance!

Human readable

Incident.0-2024 [beta test]. This is a token for a room of decision making on the Ethereum blockchain in which co-ownership between the Fonds, the grantor, and Z. F. Mesterhazy, the grantee, can be beta tested. The dimensions of this room depend on the wallet holders' angle, degree of empathy and wallet.
